WhatsApp Daily Motivational Quote Sender

User Guide v1.0

> This guide helps users set up and use the WhatsApp automation script that sends AI-generated motivational quotes + images daily using local LLM (Ollama). No OpenAI API key needed. Works offline after setup.

About the Tool

Your **WhatsApp Daily Motivational Quote Sender** is a Node.js-based app that:

- Generates **daily motivational quotes** using **local AI (Ollama + Llama3)**
- Sends them via **WhatsApp Web** to one or more contacts/groups
- Supports **image rotation by date**
- Works **offline** after initial QR scan

NOTE: You do **not need an internet connection every day.**
You do **not need an OpenAI API key.**

Folder Structure

Make sure your folder looks like this:

```
whatsapp-motivational-sender/
│
├── whatsapp-crypto-sender.js    ← Main script
├── contacts.json                ← Contact/group list
├── package.json                 ← For Node.js users
├── README.txt                   ← Setup instructions
└── images/                      ← Folder with motivational images
    ├── image1.png
    └── image2.png
```

You can rename `whatsapp-crypto-sender.js` to `whatsapp-motivational-sender.js` if preferred.

Requirements

Requirement	Details
OS	Windows, macOS, Linux
Node.js	Required for script version (optional for `.exe`)
Ollama	Must be installed locally
WhatsApp	Must be running on phone

Download Ollama from: https://ollama.ai/download

How to Run

Option A: Using `.exe` (Windows Only)

1. Open terminal and start Ollama:

   ```
   ollama run llama3
   ```

2. Double-click `whatsapp-crypto-sender.exe`

3. When prompted, scan the QR code manually using WhatsApp Web

4. After login, the tool will run silently and send messages daily at 6 AM

Option B: Using Node.js (All Platforms)

1. Install Node.js: https://nodejs.org/en/download
2. In terminal:

```
npm install
node whatsapp-crypto-sender.js
```

3. Scan the QR code shown in the terminal
4. The script runs automatically each day

Image Rotation Logic

The script picks one image per day based on the current date — ensuring fresh content every day.

To add your own images:
- Place them in the `/images` folder
- Supported formats: `.png`, `.jpg`, `.jpeg`

Example:

```
images/
|
├── 1.png
├── 2.jpg
└── 3.jpeg
```

The script rotates through these and attaches one with the quote each morning.

Sending to Multiple Contacts/Groups

Edit the `contacts.json` file with recipient IDs:

```
[
  {
    "name": "Motivation Group",
    "id": "120363180728842218@g.us"
  },
  {
    "name": "Arjit Singh",
    "id": "919999999999@c.us"
  }
]
```

You can find contact/group IDs using our earlier script or DevTools in WhatsApp Web.

Important Notes

1. WhatsApp Web Is Down

From knowledge base:

```
Sorry, something went wrong.
We're working on getting this fixed as soon as we can.
```

If WhatsApp Web is down, wait until it's back online before scanning QR

---

2. OpenAI.com Blocks Access

Also from knowledge base:

```
You are unable to access openai.com - This website is using a security service...
```

Not an issue for your script — you're using **Ollama**, not OpenAI

---

3. First-Time Setup Only Requires QR Scan

After initial login:

- Your session is saved locally
- No need to rescan unless you log out from WhatsApp mobile

---

4. Silent Failures?

If the `.exe` doesn't show anything:

- Run it from CMD to see logs
- Make sure `contacts.json` and `/images` are present
- Confirm Ollama is running (`ollama run llama3`)

Tips for Users

Tip	Description
Always keep `contacts.json` and `images/` next to the `.exe` or script	
Run once → scan QR → done	
Schedule sends at 6 AM (or customize time in script)	
Fully offline after setup — no cloud dependency	

FAQ (Frequently Asked Questions)

Q: Do I need an OpenAI API key?

No, this tool uses **Ollama + Llama3** for local AI generation — no API key or internet needed after setup.

Q: How do I update the message sent?

Update the prompt in your script:

```
prompt: "Generate a short, inspirational quote about life, success, or positivity."
```

Q: Why isn't the `.exe` doing anything when I click it?

Run the `.exe` from CMD:

```
whatsapp-crypto-sender.exe
```

Make sure:

- Ollama is running
- `contacts.json` and `images/` are present

Q: Can I change the send time?

Yes! Look for this line:

```
cron.schedule('0 6 * * *', () => { ... });
```

Change `'0 6 * * *'` to any time you want (in cron format)

Q: Will this work if my PC is off?

No. The machine must be powered on and connected during scheduled send times.

Q: Is this legal to use with WhatsApp?

Yes — it uses WhatsApp Web just like browser
Avoid sending too many messages or spamming
